The Ultimate In-Browser Developer & Productivity Hub

OmniTool Hub is an enterprise-grade ecosystem of 100+ high-performance utilities engineered to run 100% locally inside your browser's private memory sandbox. No files are ever sent to remote servers.

100+	0 Bytes	100%	FREE
CLIENT-SIDE TOOLS	UPLOADED TO CLOUD	PRIVATE & OFFLINE	NO SUBSCRIPTIONS

Zero-Knowledge Privacy

Compliant with GDPR, HIPAA, and strict data classification. Your sensitive files, tokens, and keys stay on your machine.

WebAssembly & Web APIs

Powered by local WebAssembly, PDF-Lib, and hardware-accelerated Canvas. Sub-millisecond execution speeds.

Progressive Web App (PWA)

Installable on desktop and mobile. Operates flawlessly with zero internet connection once cached.

Complete In-Memory Document Manipulation & Conversion

Process confidential agreements, tax returns, and corporate reports with zero server exposure. Split, combine, convert to ultra-crisp 300 DPI images, downscale bloated scans, and extract structured data instantly.

Split & Extract

Custom page ranges (e.g. 1-3, 5), Odd/Even page filters, and export to consolidated PDF or ZIP archive.

Range Selector
ZIP Batching

High-DPI Images

Render vector pages into lossless PNG, photo JPEG, or compact WebP at 100, 150, or 300 DPI Ultra Print.

300 DPI Print
DCT Quality

Multi-PDF Merge

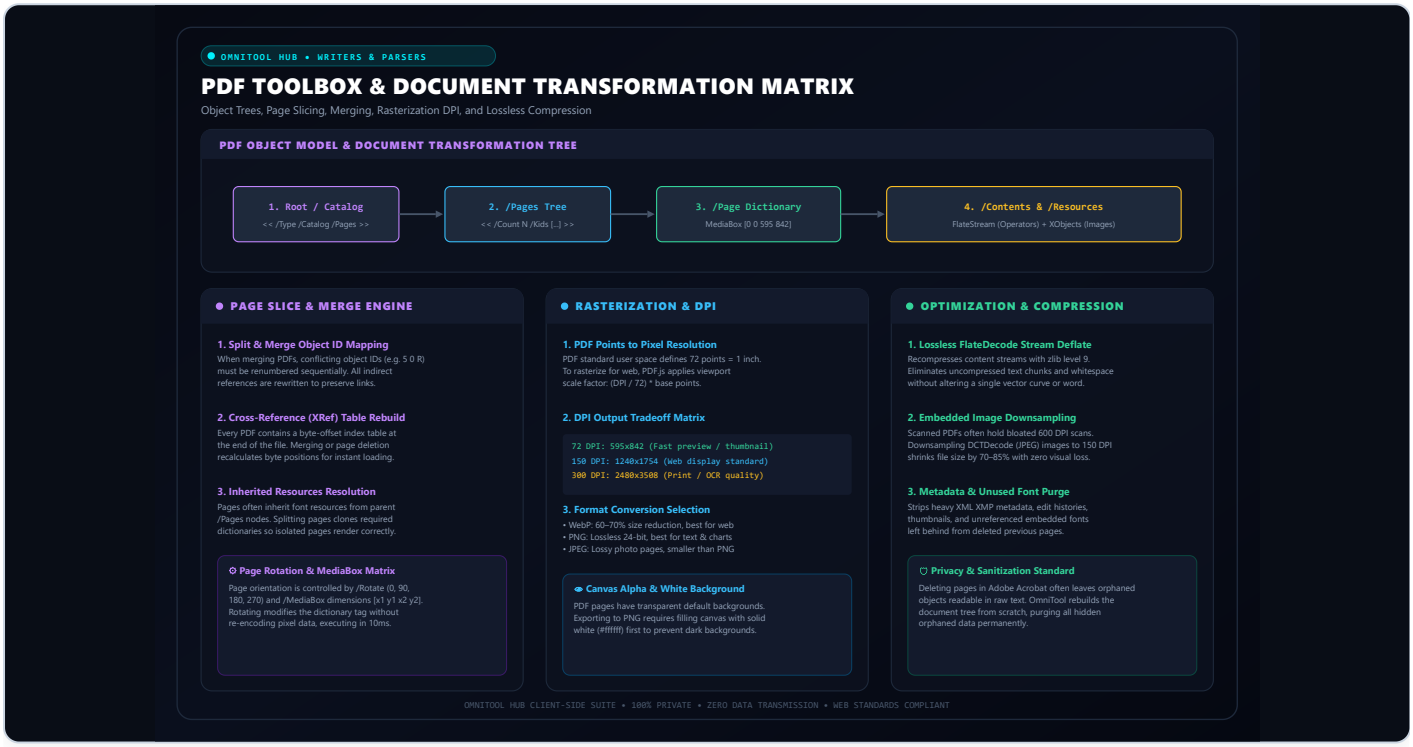

Drag multiple documents into a visual queue, reorder pages with one click, and weld them into a master PDF.

Queue Reorder
Instant Weld

Smart Compress

Re-rasterize bloated scanner noise and heavy vector paths to shrink documents by up to 80% without quality loss.

Canvas Engine
-80% Size

Fullscreen Zoom Inspector & Single-Page Snapshots

Inspect fine print at up to 300% zoom with Fit Page and Fit Width dials. Download individual pages as PNG, JPG, or PDF with a single click.

Text & Structured JSON Extraction

Extract unformatted plain text for LLM prompts or tokenized JSON glyph coordinates for automated data extraction pipelines.

Visual Styling, Color Science & Accessibility Verification

Craft modern user interfaces with award-winning design DNA. Generate multi-layer depth, verify WCAG accessibility contrast, and construct production-ready CSS and Tailwind tokens.

CSS Visual Studio

Interactive gradient generator (linear, radial, conic), frosted glassmorphism surfaces, and 3D layered box-shadow stacks with live CSS/Tailwind code output.

Gradients | Glassmorphism | Tailwind CSS

Color Lab & Contrast

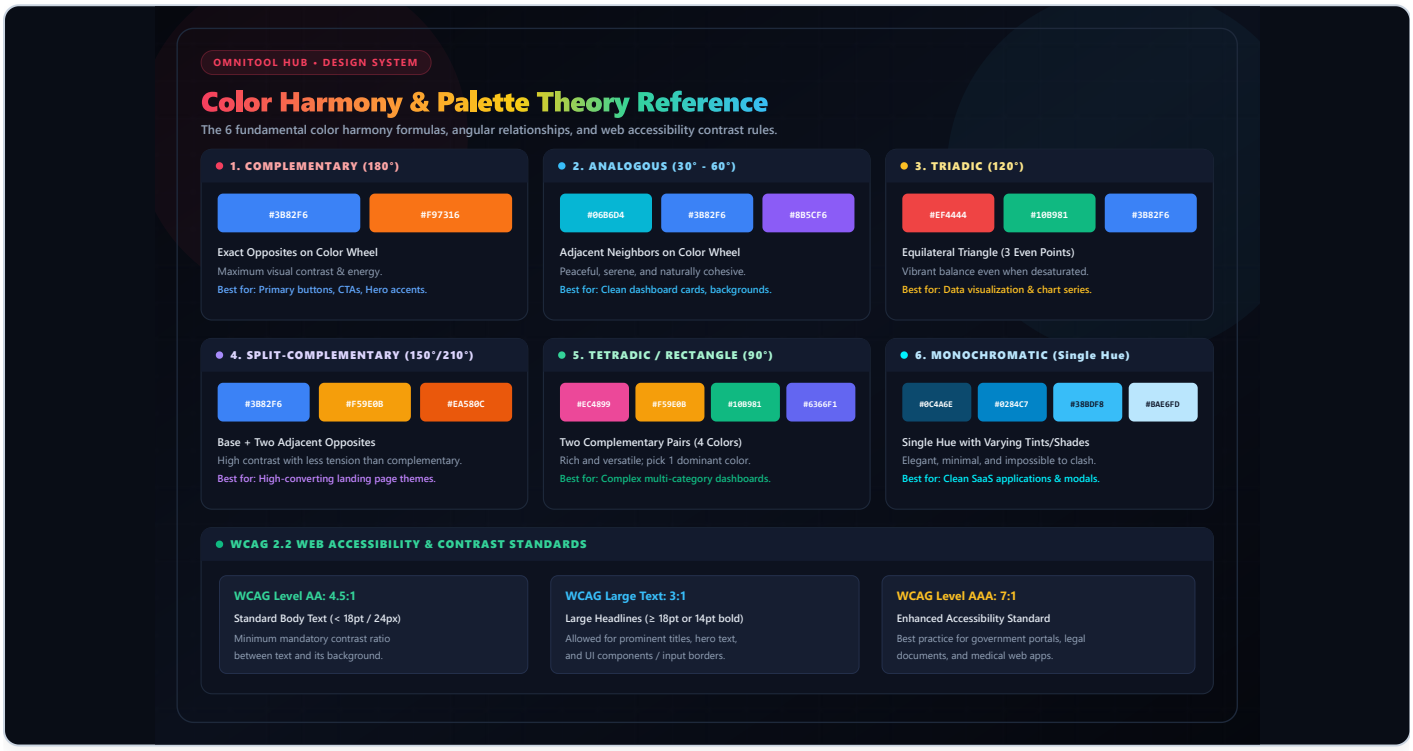

Validate color contrast against WCAG 2.1 AA/AAA standards and modern APCA perception algorithms. Generate complementary, triadic, and monochromatic shade ramps.

WCAG AA/AAA | APCA Contrast | Palette Ramps

QR & Barcode Studio

Design branded QR codes with embedded center logos, gradient fills, and custom corner eyes. Full support for URLs, vCards, Wi-Fi logins, and SVG vector exports.

Custom Branding | vCard / Wi-Fi | Vector SVG

Design Token Discipline: Every visual tool in OmniTool Hub outputs clean, human-crafted CSS variables and Tailwind classes conforming to 4px/8px spatial rhythms and hairline border standards.

High-Precision Syntax Validation, Decoders & Code Analysis

Eliminate tedious command-line tasks with instantaneous client-side developer utilities. Inspect security tokens, format complex JSON payloads, test regex patterns, and compute differences.

JWT Inspector

Decode JSON Web Tokens, inspect header algorithms, payload claims, and verify cryptographic signatures offline.

Header & Claims
Crypto Check

JSON Studio

Format, validate, and minify dirty JSON. Interactive collapsible tree visualizer and JSONPath query engine.

Tree Folding
JSONPath

Regex Tester

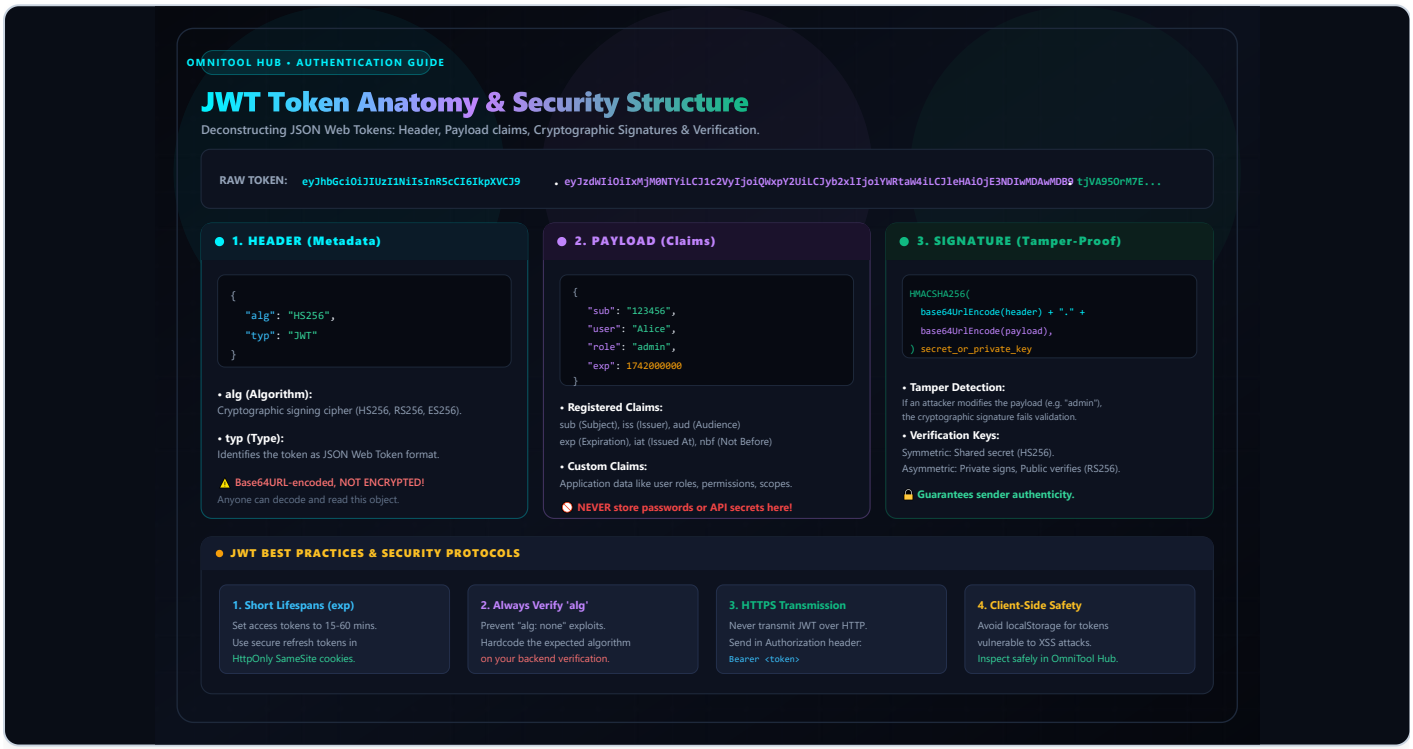

Real-time visual pattern matching with highlighted capture groups, multi-line flags, and regex cheat sheet.

Visual Groups
Flag Dials

Text Diff Studio

Semantic code and text comparison. Side-by-side or inline view with Git patch file generation.

Side-by-Side
Git Patches

Hash & Digest Generator

Compute MD5, SHA-1, SHA-256, SHA-512, and HMAC signatures in local browser memory via Web Crypto.

Universal Encoders

Convert data between Base64, Hexadecimal, Binary, URL Percent-Encoding, and HTML entities.

URL & CIDR Analyzers

Parse complex URLs into structured query parameters; calculate IP ranges, subnet masks, and broadcast IPs.

In-Browser Audio/Video Recording, Editing & Screenshot Studio

Capture, edit, and optimize multimedia assets directly in your browser tab without downloading bloated desktop software. Powered by WebRTC local screen capture and the Web Audio API.

Screenshot Studio

Capture desktop or window screens, crop regions, add spotlight highlights, blur sensitive PII, stamp annotations, and export directly to PNG or multi-page PDF.

PII Blurring · Spotlight Callouts · PDF Export

Screen & Voice Recorder

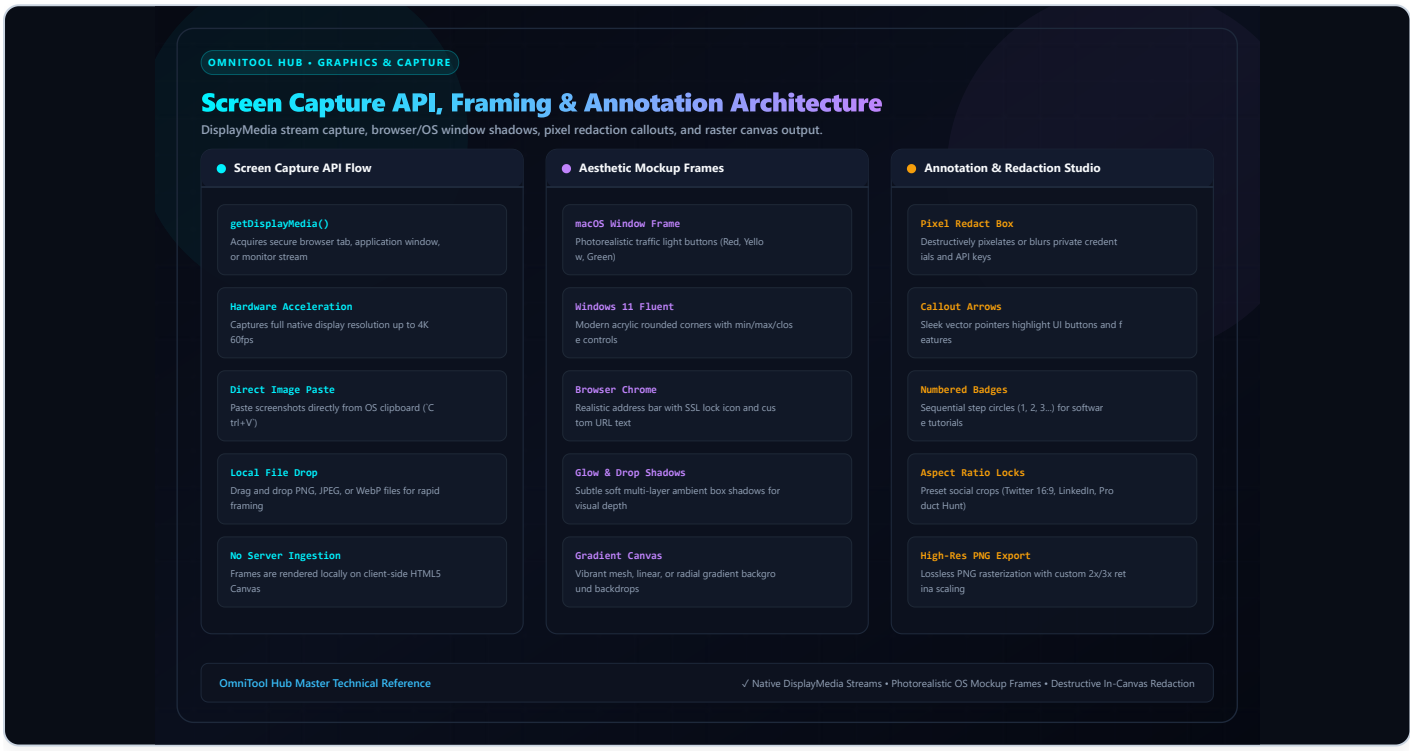

Record full screen, application windows, or browser tabs with synchronized microphone audio. 100% local stream encoding with instant WebM/MP4 download.

WebRTC Local · Tab Audio · No Watermarks

Video to GIF & Speed

Convert video recordings into lightweight animated GIFs with custom FPS, loop settings, and playback speed adjustments (0.25× to 4×).

GIF Encoder · Speed Control · Zero Cloud Wait

Audio Transcoder & Waveforms

Visualize real-time frequency waveforms, trim audio clips, adjust volume gain, and transcode audio formats right inside your browser tab.

Voice Memo & Speech Tools

High-fidelity voice memo recording with browser-based pitch analysis and live speech transcription for fast documentation.

Cryptographic Security, PII Sanitization & Zero-Trust Guarantee

Protect sensitive credentials, anonymize confidential records before sharing, and generate cryptographically secure keys using the browser's hardware-backed Web Crypto API.

PII Anonymizer

Automatically detect and redact names, emails, phone numbers, credit cards, and SSNs from raw text.

Regex Presets

Custom Masks

Keypair Generator

Generate secure RSA (2048/4096-bit) and ECDSA public/private keypairs formatted in standard SPKI/PKCS8 PEM.

RSA 4096

ECDSA P-256

AES-256-GCM

Encrypt and decrypt files or text payloads with authenticated military-grade AES-256 symmetric cipher.

GCM Auth

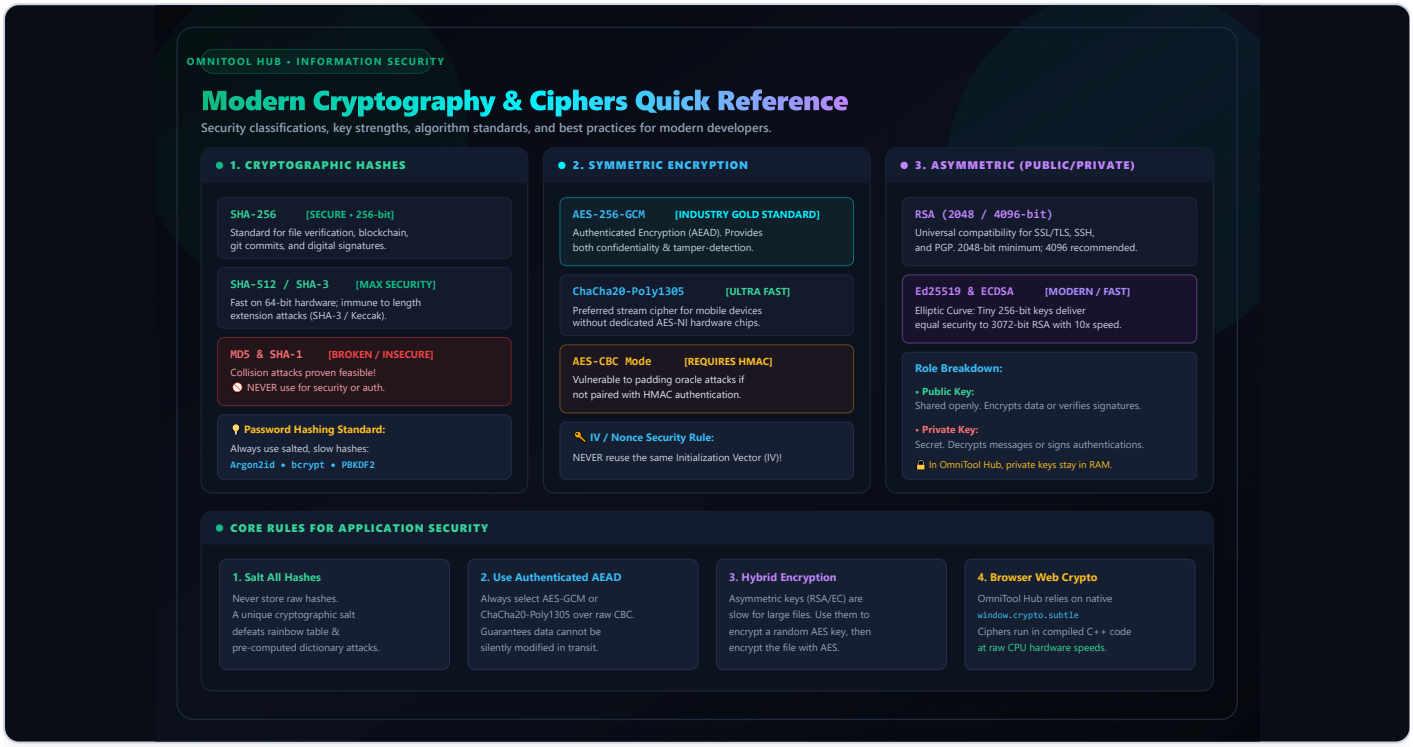

Zero Server Leak

Password Studio

Generate high-entropy, pronounceable, or custom-pattern passwords with real-time crack time estimates.

True Random

Entropy Score

The OmniTool Hub Promise: Whether you are merging multi-million dollar contracts, generating cryptographic keys, or analyzing server tokens, your payload NEVER leaves your computer. OmniTool Hub is the private, permanent, and free toolbox for the modern web.
